### Abstract

**PURPOSE:** To simplify configuration, to make the mechanism low in manufacturing cost and small in size by lowering a load to the driving source, and also to improve usability by suppressing an operating sound generated at the time of cassette ejecting operation.

**CONSTITUTION:** The cassette loading mechanism provided with a 2nd elastic member 9 whose one end part is disposed on the position adjacent to an engaging groove 1a of a cam plate 1, and the other end part is disposed at the lower side edge part of a side plate 5. By the 2nd elastic member 9, the cam plate 1 is energized in the direction where the cassette is lowered by a cam part 1c.
